Lastest Generation Platform with DDR4 Technology

QuantaPlex T41S-2U operates with the latest Intel® E5-2600 v3 product family and the newest DDR4 memory technology. It provides maximum 18-core count CPU with enhanced QPI bandwidth to 9.6GT/s, a 20 percent improvement from the previous generation. With up to 1024 GB memory capacity, the system performance has a Linpack score up to 80 percent increase and is optimized to run the most demanding of applications.

Space and Energy Efficiency

QuantaPlex T41S-2U provides a 2U four-node system with sufficient IO expansion for storage and networking increases. With shared infrastructure, like cooling and power supply, the total cost of ownership (TCO) is lower than four regular 1U servers. The QuantaPlex T41S-2U is a great solution for increasing the number of servers per square foot in a limited space.
Various OCP Network Options

QCT uses the modular design concept to optimize system interoperability, flexibility and serviceability. QCT's flexible network mezzanine cards are designed to fit into every QCT server/storage system to reduce the complexity and uncertainty of the system availability options.

Dual Rotor Fan Design

QCT dual rotor fans maintain non-impact performance. Compared to a single fan design, a dual rotor fan keeps the system's internal air flowing in the right direction if one rotor fails, enhancing product stability and durability.

Dual Rotor Fan | **Single Rotor Fan**

Air flow when one fan fails | Air flow when one rotor fails

High Serviceability

The QuantaPlex T41S-2U consistently delivers high serviceability to reduce service time and costs. Its module design concept for the fan cage and the PDB cage reduces cable routing.
